

Recommendation Letter

I am pleased to recommend Arlind Shaqiri, who worked with us at amberSearch for four years as a Lead Frontend Engineer.

During his time with our company, Arlind was responsible for leading the development of the frontend architecture and delivering high-quality, scalable user interfaces for our platform. He worked closely with product managers, designers, and backend engineers to ensure that features were implemented efficiently and met both technical and business requirements.

While his primary focus was frontend development, Arlind also demonstrated strong full-stack capabilities. He contributed to backend and middleware development using Node.js and Express, implementing API routes, handling server-side logic, and working with file processing when needed. His ability to operate across the JavaScript and TypeScript stack allowed him to bridge frontend and backend systems effectively and support the overall stability and performance of the platform.

As a team member and technical lead, Arlind consistently showed strong problem-solving skills, attention to detail, and a high level of ownership over his work. He maintained high development standards, supported collaboration within the team, and approached challenges with a pragmatic and solution-oriented mindset.

Arlind is a reliable and dedicated engineer who combines solid technical expertise with a professional and cooperative working style. His contributions had a meaningful impact on our engineering efforts, and I am confident he will bring the same commitment and technical capability to any future role.

I am happy to recommend Arlind Shaqiri and wish him continued success in his career.

Sincerely,

Igli Manaj
CTO & Co-Founder @amberSearch
